(ADAPTER)User Story 10 –Installation package and deployment guide for UCRM Test Client

Story ID: US-UCRM-TC-002

Actor: INFRA Engineer/Adapter Integration

Goal: Installation package and deployment guide for UCRM Test Client

Business Value: Enables consistent installation of the official UCRM Test Client across environments without requiring custom development or ad-hoc setup.

Jira Ticket: TBD

User Story:

As an INFRA engineer,
I want a clear and approved installation and deployment guide for the official UCRM Test Client,
So that I can install and maintain the client in each required environment without needing custom development.

Key Scenarios & Variations:

- Installation in OVH environment
- Installation in pre-prod environment
- Runtime dependency missing

Acceptance Criteria:

Given the official UCRM Test Client is provided
When installation guide is created
Then it must describe how to obtain binaries/package and version

Given runtime dependencies exist
When prerequisites are documented
Then OS and runtime requirements must be specified

Given installation is required in multiple environments
When steps are documented
Then step-by-step installation for OVH and one pre-prod environment must exist

Given installation fails or rollback required
When uninstall is needed
Then rollback/uninstall procedure must be documented

Given documentation is finalized

When review is completed

Then UCRM representative and TEST/QA must approve the guide
