(ADAPTER)User Story 6 – Propagate UCRM Outcome Back to IPL

Story ID:US-ADAPTER-P2P-006
Actor: Adapter Integration
Goal: Propagate UCRM acceptance/rejection outcome back to IPL.
Business Value: Provides IPL with end-to-end visibility of message delivery and processing status (as reported by UCRM), enabling appropriate business actions (e.g., retries, alerts, compensations) on IPL side.
Referenced Diagram:UCRI 2.0 – P2P FlowDiagram (segment: “The Adapter propagates the outcome back to the sender system, ensuring that message delivery and processing status are transparently communicated”).
Jira Ticket: IPL-26520: (ADAPTER) Propagate UCRM Outcome Back to IPL OPEN

User Story:

> As the Adapter Integration, I want to propagate the UCRM processing outcome (acceptance or rejection) back to IPL so that IPL has transparent visibility of message delivery and processing status.

Key Scenarios & Variations:

- UCRM acceptance propagated to IPL.
- UCRM business rejection propagated to IPL.
- UCRM technical rejection or communication failure propagated to IPL.

Acceptance Criteria:

- Given a standardized status outcome produced by US-IPL-P2P-005 for a previously forwarded message
  When the Adapter prepares a notification to IPL
  Then the Adapter must map the internal status (ACCEPTED, REJECTED_BUSINESS, REJECTED_TECHNICAL, UNKNOWN) to the response contract agreed with IPL and send it with the original correlation ID.

- Given an acceptance outcome from UCRM
  When the Adapter notifies IPL
  Then IPL must be able to identify the original message and mark it as successfully processed by UCRM.
- Given a rejection outcome from UCRM
  When the Adapter notifies IPL
  Then the response must include the UCRM error code and description (where available) so that IPL can decide on corrective actions.
- Given a scenario where UCRM did not respond (e.g., timeout) and retries are exhausted in US-IPL-P2P-004
  When the Adapter determines the message is undeliverable
  Then the Adapter must send a failure status to IPL indicating a delivery failure, distinct from UCRM business rejection.
