(ADAPTER)User Story-09: Confirm scope and prerequisites for UCRM Test Client usage

Story ID: US-ADAPTER-TC-001
Actor: TEST/QA Lead
Goal: Confirm scope and prerequisites for UCRM Test Client usage
Business Value: Ensures all environments, dependencies, and responsibilities are clearly defined before executing quality-gate tests, reducing risk of late blockers or environment surprises.
Jira Ticket: TBD

User Story:

As a TEST/QA lead,
I want the scope, environments, and technical prerequisites for using the official UCRM Test Client to be clearly defined and agreed with UCRM and IPL/Adapter teams,
So that we can plan and execute the quality-gate tests without surprises.

Key Scenarios & Variations:

- Test client used in OVH environment
- Test client used in pre-prod environment
- Missing prerequisites discovered late

Acceptance Criteria:

Given the UCRM Test Client is planned for quality gate testing
When the scope document is created
Then it must list all target environments (OVH / pre-prod)

Given the environments are defined
When prerequisites are documented
Then network routes, certificates, firewall rules, credentials, and UCRM configuration must be listed

Given multiple teams are involved
When responsibilities are defined
